

HD/SD-SDI MOBILE VIDEO STUDIO

MS-1000B

The Datavideo MS-1000B is a one-box solution designed around the SE-1000 Six-Channel HD / SD Video Switcher.

The MS-1000B system provides the option to work in Standard Definition or full High Definition.

The MS-1000B features 6 inputs (5 HD/SD-SDI and 1 DVI/RGB) with 3 HD/SD-SDI and Component (YUV) outputs. RS-422 control, Ethernet connectivity and a built-in, 10-bit, six-channel frame synchronizer that synchronizes all inputs without the need for genlock (external genlock synchronization also available).

To assist the producer during any live events, the SE-1000 also features 6 built-in HD-SDI to HD-YUV, SD-YUV and Composite format converters, enabling loop-through of each input for real time SD monitoring during production.

The MS-1000B is an HD & SD solution for users that require a flexible, but at the same time affordable, solution. It is perfect for education, places of worship, internet streaming, conferences and many more applications.

The whole system is fully integrated with the ITC-100 for talkback/intercom, 2 x TLM-433 monitor banks and the TLM-170 main output monitor.

The MS-1000B is the ultimate HD and SD Mobile Video Studio, a true one-box solution to go "Live In Seconds" with easy setup and break down at any location.

FEATURES

- Integrated power distribution center provides a simple and secure solution for connecting power in the studio or in the field from a 12V source, such as a power generator.
- The Datavideo Mobile Video Studio range is designed to be ready in seconds at any location.
- An extensive rear panel accessory range ensures easy connection to existing equipment on location or in the studio.
- Easy setup, breakdown and storage.
- Standard 19-inch rack unit for integration with 3rd party products like wireless microphone systems.
- Loop-through of all camera sources, not just next source and program output, for confident preview of all live sources.

APPLICATIONS
