

**HD/SD-SDI MOBILE VIDEO STUDIO**

# HS-1000

The Datavideo HS-1000 is an affordable turnkey solution designed around Datavideo's SE-1000 six-channel HD/SD-SDI video switcher. Live events can be very hectic, so to assist in identifying each camera location and check if cameras have finished focusing or reframing, etc., the HS-1000 has six high-quality monitors. These provide the producer with a live feed from each of the sources. Additionally, there is a 17-inch HD monitor, which via Picture-in-Picture shows current live (program) and next (source) views.

Communication between the production team is vital, and with the HS-1000's integrated ITC-100 eight-channel talkback & tally system, the director, cameramen, floor manager and others can communicate across all channels, or to an individual channel. High S/N ratio makes the communication crisp and clear. The included six TD-1 dual-color tally light indicators can easily be mounted on cameras, providing both the cameramen and the talent in front of the camera with clear information on which camera is live and "next to go live."

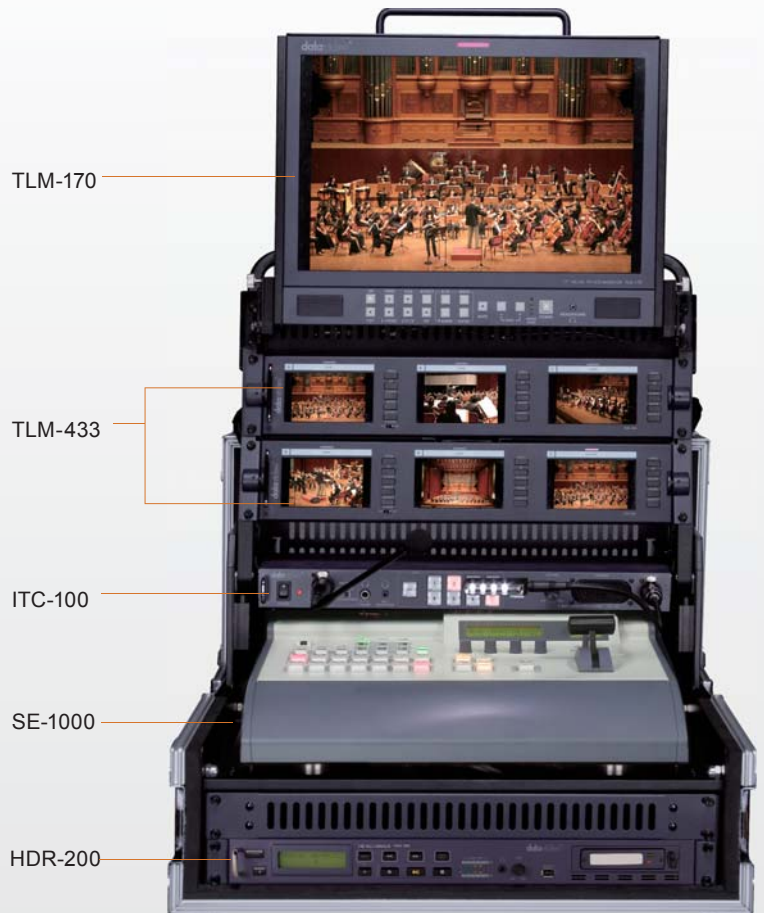

The Datavideo HDR-200 HD/SD-SDI recorder, allows you to record the event or playback recorded footage, depending on your chosen configuration. Once you have completed your recording, simply eject the hard drive carrier for easy connection via USB to your editing system.

The integrated PD-1 power distributor provides a simple and secure solution for connecting power via a single socket, whether you find yourself in the studio, on location or even in the field, where you can work with a 12V generator or battery.

The HS-1000 is a true "one box" solution designed for demanding users who need equipment to be "live in seconds." Easy to set up and break down at any location.

## FEATURES

To avoid the mess and inconvenience of individual power supplies, Datavideo HS-1000 comes with an integrated PD-1 power distribution center. Providing a simple and secure solution for connecting all the integrated equipment from a single socket. Whether you find yourself, in the studio, on location or even in the field where you can work with a 12V generator or battery.
